

PROMARK WORKFORCE MANAGEMENT

ProOEE

PROOEE – OVERALL EQUIPMENT EFFECTIVENESS

Mark Information's ProOEE module makes it possible to monitor both planned and actual production status in real-time. ProOEE suits all types of production and helps the company ensure that the correct tasks are executed according to schedule.

ARE WE WORKING ON THE RIGHT TASKS?

PLANNED AND ACTUAL PRODUCTION STATUS IN REAL-TIME

With ProOEE, your company can display planned as well as ongoing production data on-screen. As your employees register their time usage and production results, the actual status in the individual production units is updated. Thus ProOEE creates a foundation for continuously ensuring that company resources are used correctly and that information on what needs to be executed is available and visible to everybody.

ARE WE ON SCHEDULE?

The time spent and the actual production result is updated in real-time and can be compared to what was planned. This way, irregularities and potential delays are identified early on, enabling the company to act swiftly.

DEVIATIONS INDICATED IMMEDIATELY

As soon as a task exceeds the planned time, the time will be highlighted on the screen to clearly indicated the deviation and allow you to start corrective actions.

ENSURING OPTIMUM PRODUCTIVITY

ADVANTAGES

In many companies, information boards are used for displaying the status of production and projects – as a print-out or a status drawn directly on a whiteboard, for example. Often, the information is outdated before it is published on the board and therefore, it will display an erroneous status.

One of the advantages of ProOEE is the ability to present up-to-date production data on big screens/monitors on the shop floor (a Production Display). Moreover, responsible employees in production can use the solution for ad-hoc production monitoring.

DETECT DEVIATIONS IN PRODUCTION WHICH INFLUENCE DELIVERY

ProOEE allows you to detect deviations in production/on projects such as machine stop or lack of manpower or materials. As a result, you can adjust plans to ensure that orders are delivered on time and that the effort is aligned with what is planned.

ProOEE

The information in ProOEE can be configured, filtered and sorted according to customer wishes; you may have up to 10 columns of information related to orders and operations and you can select to display – among others

- Planned hours
- Actual hours
- Runtime
- Remaining runtime
- Status (e.g. production or interruption/stoppage)
- Manning
- Planned end date
- Time left till completion

ProOEE displays both planned and actual production status in real-time. You can publish ProOEE in any format you wish: on big screens or PC, Ipad (tablet) and smartphone. ProOEE is very flexible and can easily be adjusted to meet the needs of the individual production unit. It gives an updated production status on the medium/media of choice.

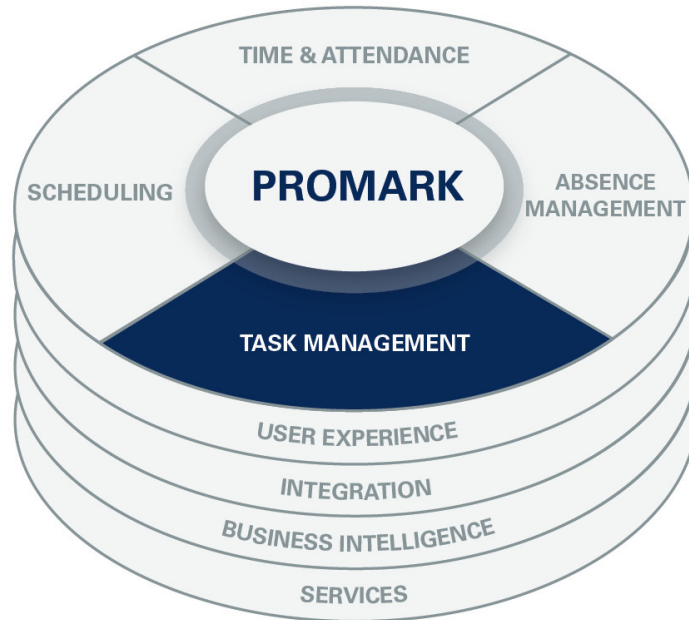

OPTIMUM UTILISATION OF COMPANY RESOURCES

With ProOEE you can monitor production in real-time; ProOEE provides you with updated information whenever you need to make decisions. You can see whether the different orders, operations and projects are on schedule or whether deviations have occurred as a result of machine failure, lack of manpower, materials or the like.

Resources that are not used effectively may result in lost business which you may not regain. A delay due to an equipment breakdown is difficult to catch up with, at least not without additional costs and extra strain on personnel and machinery so the point is to react quickly when it happens. If you want to ensure optimum use of resources, ProOEE is the solution for you.

PROMARK WORKFORCE MANAGEMENT

ProOEE is part of Task management in ProMark Workforce Management. ProMark helps to manage companies' largest and most valuable and strategic resource – the workforce. Contact us at +44 808 23 44 786 for more information about all opportunities or go to www.mark-info.co.uk.

TIME AND ATTENDANCE

Registration of working hours and deviation reasons validated against collective and local agreements creates the correct payroll basis

ABSENCE MANAGEMENT

Advanced handling of accrual, use and transfer of holiday. Sickness management with distribution on the right accounts and workflows for follow-up and overview

TASK MANAGEMENT

Registration of employee activities (job, project and process) refines ERP data for follow-up on resources and productivity

SCHEDULING

Planning and scheduling for effective use of company resources – even in case of deviations

USER EXPERIENCE

Smartphones, portal and terminals for registration, overview and approvals

INTEGRATION

Standard integration to payroll/HR/ERP ensures exchange of important data

BUSINESS INTELLIGENCE

Reports and analysis of data for measuring absence, productivity and savings

SERVICES

Hotline, private cloud, application management, superuser service and hardware service that ease the daily operation of ProMark

2019-05

MARK INFORMATION

Mark Information is an innovative software company offering Workforce Management solutions from offices in Denmark, Sweden, Norway, United Kingdom and Romania. Mark Information's Workforce Management solution ProMark enables customers to optimise productivity and generate savings through scheduling the right resources, at the right time, for the right job and ensures that resources are remunerated correctly in the most effective way. Mark Information services global corporations and has more than 1000 installations and 300,000 users. Read more at www.mark-info.co.uk.
