

PROMARK WORKFORCE MANAGEMENT

ProTerminal

ProTerminal is a robust registration terminal for ProMark. Positioned strategically in your company, ProTerminal will capture data accurately for use within the ProMark suite of modules.

LAN-Touch terminal

ProTerminal

**TAILOR-MADE
TOUCH REGISTRATION**

**TERMINALS FOR
ANY NEED**

PROTERMINAL OFFERS SIMPLE AND INTUITIVE REGISTRATION

ProTerminal is typically mounted at the entrance or some other easily accessible place in the company. It permits employees and managers to clock in and out, and register how their time is spent on the shop floor.

ProTerminal is intelligent as it registers deviations and asks for reasons for these. If a clock-in registration is missing, for example, ProTerminal will ask for a reason the next time that employee attempts to register. Until a reason has been given, a new registration will not be accepted.

Two versions of ProTerminal are available: the LAN-Touch terminal and the LAN-Touch wet room terminal. The LAN-Touch terminal is elegantly designed to look great in an office but is robust enough to cope with the sometimes harsh environment of a manufacturing company. The LAN-Touch wet room terminal is ideal for damp production environments or areas that need cleaning with larger amounts of water.

The terminals are equipped with 16 touch function keys which may be configured individually according to the company's requirements and the physical location of the terminals.

LAN-Touch wet room terminal

In addition to the physical terminals, we also offer a software alternative, ProPC. This allows for registration in a normal windows application on a PC or tablet. ProPC is the mobile work station offering the same functionality as the physical terminals, and in addition, a very powerful offline functionality well suited for employees on the go. Read more in separate product sheet.

READERS AND ID MEDIA

ProTerminal can be configured with various kinds of readers: magnetic card or barcode readers, proximity, HID, mifare and biometry combined with a card or finger alone. It is only a question of what best suits the company's needs. Depending on which functions should be registered on the terminal, the different readers and id media each have their own advantages.

SET-UP VIA LAN

The terminals communicate with the database via the LAN/WAN with TCP/IP. In the case of server interruption, normal operation will not be affected as ProTerminal can continue to operate off-line until the network is restored.

**FAST AND EASY
REGISTRATION****□ PROTERMINAL ENSURES PROMPT AND EASY REGISTRATION**

ProTerminal allows your employees to clock in and out via a simple and intuitive interface and to register how they spend their time in a particular area if you so wish. No training is required in order to use the terminals. All commands are stated in clear text so there is no need to remember codes or other troublesome combinations.

**OVERVIEW OF
OWN INFORMATION**

ProTerminal allows the employees to check their own time status. For example, how much holiday has been accrued and spent, their flexi-time balance and any absence. This means employees no longer need to contact administration to get access to their own information.

**REGISTRATIONS
IN REAL-TIME****□ PROTERMINAL IS THE BASIS OF OPTIMISATION**

ProTerminal ensures the correct payroll information for the company's employees is collected at the source, i.e. the employee. At the same time, the terminals create transparency as all employees have access to their own information at any time. Reasons for deviations are immediately registered, and depending on the company's choices, the manager receives these for approval and is in a position to take action if necessary.

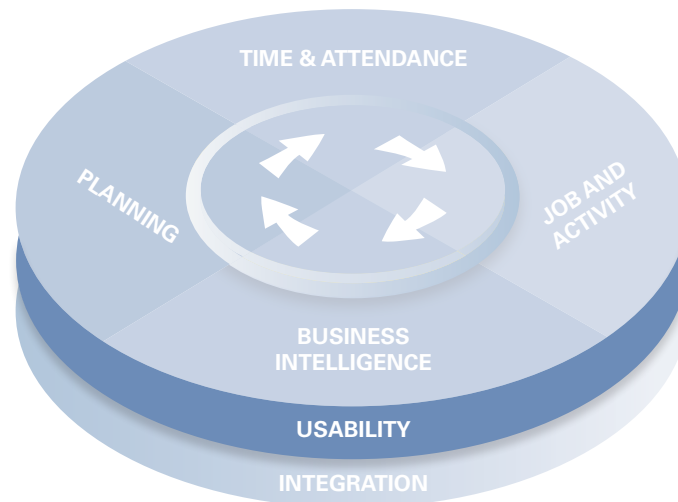

**ENSURES THE BASIS
FOR OPTIMISATION**

In production the benefit of the terminal lies in the registrations made in real-time. The terminal allows detailed and precise registration within the production environment. This results in valuable data on aspects of production such as quantity of orders, completed operations, and material consumption as well as human and machine resources.

By using ProTerminal, you obtain quality registrations that permit continual optimisation of company work processes.

PROMARK WORKFORCE MANAGEMENT

ProTerminal is part of the Usability section of ProMark Workforce Management. With ProMark we help to manage companies' largest and most valuable and strategic resource – the workforce. Contact us for more information about all opportunities: +44 1163 660 655 or go to www.mark-info.co.uk.

TIME AND ATTENDANCE

Registration of working hours and absence as well as deviation reasons validated against collective and local agreements for creation of the correct payroll foundation.

JOB AND ACTIVITY

Job, project- and process registration refines ERP data for follow-up on production resources and productivity.

PLANNING

Planning and scheduling for effective use of company resources.

BUSINESS INTELLIGENCE

Tool for analysis of real-time and historic data for measuring productivity, absence and savings.

USABILITY

User access via smartphones, portal and terminals for collection, enquiries and approval of time, job and activity data.

INTEGRATION

Standard integration to payroll, HR and ERP systems leading to savings through automation.

About

MARK INFORMATION

Mark Information is an innovative software company offering Workforce Management solutions from offices in Denmark, Sweden, Norway, United Kingdom and Romania. Mark Information's Workforce Management solution ProMark enables customers to optimise productivity and generate savings through scheduling the right resources, at the right time, for the right job and ensures that resources are remunerated correctly in the most effective way. Mark Information services global corporations and has more than 1000 installations and 300,000 users. Read more at www.mark-info.co.uk.
