

Workforce Management in a mobile world

Working life is moving into the mobile phone at a rapid pace and mobile apps are now a pivotal element of a modern Workforce Management solution. Therefore, ProMark is continuously developed for this particular user interface.

The development is both of a more technical nature such as single sign-on as well as functionality-oriented. We are working diligently to make the mobile phone a work tool which is at least as valuable for our customers' employees as the PC and have a huge focus on duplicating functionality from our portal solution to the mobile phone.

This means that the mobile app can also be used for:

- registration of supplements, mileage and allowances in an easy way
- viewing own work schedules and swap, sell and bid for vacant shifts
- registration of working time spent on projects and clocking in and out on jobs
- viewing the specific tasks that have been assigned to you on each day

Scania signs cloud agreement with Mark Information

Scania has recently signed an agreement with Mark Information on a ProMark solution covering 18,000 employees at all Scania's operations in Sweden.

The agreement includes modules for time and attendance reporting, sickness absence management and scheduling with full mobility and self-service options delivered as a cloud solution.

Integration to other business systems is also an important part of the project. Hence, our strong focus on the SAP eco system and having SAP-certified integrations to e.g. SAP SuccessFactors did not go unnoticed during Scania's vendor selection process.
