

PROMARK WORKFORCE MANAGEMENT

# ProMark integration with ProHost CAL

## TAILOR PROMARK TO YOUR USER INTERFACES WITH PROHOST CAL

With the ProHost CAL integration (Client Access Licence), the company can gain access to ProMark's functionality, business logic and data, allowing you to build your own role-based apps to the employees and ensure a consistent user interface across systems.

# ProHost CAL

## **PROHOST CAL PROVIDES FLEXIBILITY TO BUILD OWN USER INTERFACES**

ProMark can be integrated with other business systems in the company in a number of different ways, from the very simple to the most modern and advanced.

With ProHost CAL, you can get all the ProMark functionality you need, and at the same time tailor the user interfaces to your employees to achieve a high degree of recognisability and can customise the user experience.

### **ACCESS TO PROMARK FUNCTIONALITY VIA OWN USER INTERFACES**

CAL stands for Client Access Licence, and means that you as a customer get the ability to access ProMark's advanced functions, business logic and data, and can use it via other systems. This allows you to build your own apps or user interfaces which communicate directly with the ProMark solution by using the same APIs as the ProMark clients use.

### **CONSISTENT USER EXPERIENCE FOR ALL SYSTEMS**

Your employees can thus get a consistent user experience for all systems, e.g. in the company's own portal or intranet. At the same time, it is possible to build role-based apps and user interfaces to the employees which only contain exactly the functions that the individual employee role needs in the daily work.

### **STANDARDISED EXCHANGE OF DATA**

The exchange of data takes place via modern API integration where the systems send requests and responses which contain all relevant data in order to place it correctly in both systems. This means that ProHost acts as a REST API server with REST API services where an external system calls ProMark services.

### **DATA IN REAL TIME**

Data is sent in the simple and easy to read JSON format which is best practice in modern system integration. The exchange of data takes places in real time, which is standard in ProMark.

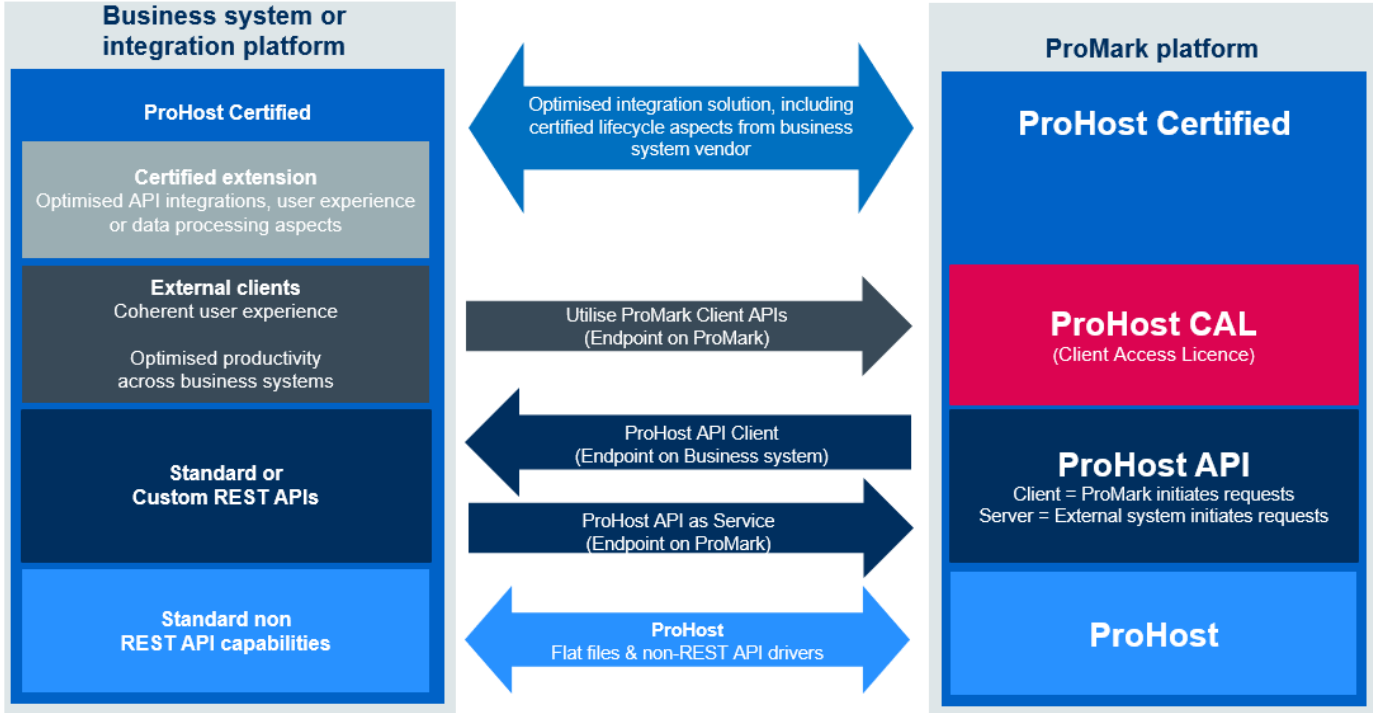

### **SECURE DATA EXCHANGE**

The data security is very high due to the direct communication between the systems via e.g. SSL.

### **AUTHENTICATION WITH OAUTH2**

User access can be granted via different types of authentication or by verifying the user through logging into another system (OAuth2 – single sign-on). OAuth2 is the method chosen by most modern integrations to increase security.

# ProHost CAL

## WHY PROHOST CAL?

With ProHost CAL, the company can develop next-generation user experiences to their employees which provide a number of benefits:

- One entry point for the user with a consistent user experience across apps saves time
- Individual user interfaces/apps to each user role with simple functions optimise workflows for the individual employee
- Merge of business data and work processes provides new opportunities to achieve insights in real time
- Opportunity to exploit ProMark’s business logic and data in platforms without use of coding provides productivity improvements for the individual employee in relation to their role in the company and thus for the company in general

## OTHER TYPES OF INTEGRATION

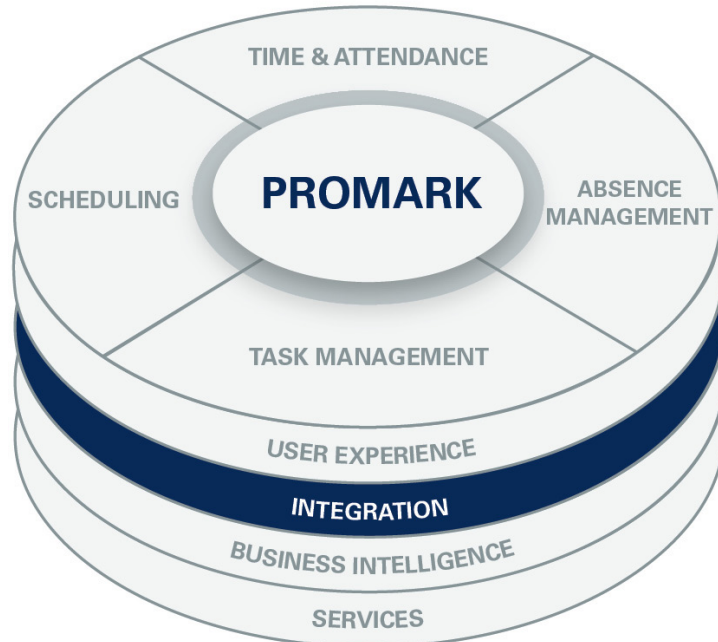

Depending on your need, we offer different integration methods.
