

# ProMark integration with ProHost Certified

## MODERN, TURNKEY INTEGRATION READY FOR USE

With ProHost Certified, you get a complete solution with built-in integration as we have developed ProMark solutions specifically for SAP's and Microsoft's app centres which are continuously maintained and updated at the cadence required in these solutions. Thus, ProMark acts as a natural extension of these business systems.

At the same time, integration with ProHost Certified also allows for exploiting our other integration solutions if you need different integration methods for different systems; an all-in-one solution.

# ProHost Certified

## **MODERN, TURNKEY INTEGRATION READY FOR USE**

ProMark can be integrated with other business systems in the company in a number of different ways, from the very simple to the most modern and advanced.

ProHost Certified is the controlled and structured approach to integration with other business systems.

## **CLOUD SOLUTION AS APP WITH MICROSOFT AND SAP**

To ensure that ProMark is a great match to advanced cloud solutions, we have developed ProMark solutions specifically for SAP's and Microsoft's app centres. In that way, you get a standard solution with built-in integration which supports configuration instead of customer-specific coding – both in terms of the business system and ProMark. Thus, ProMark acts as a natural extension of these business systems.

## **CERTIFIED AND CONTINUOUSLY UPDATED**

In the certified applications purchased via e.g. Microsoft's or SAP's app centers, the REST API integration is optimised, and the ProMark solution is continuously maintained and updated according to the current version of the supplier's system.

## **OPTIMISED OPTIONS**

ProHost Certified is built on top of ProHost and/or ProMark REST-APIs to clients and includes one or more of these options:

- Optimised APIs in both business system and ProMark
- Optimised logging and data processing capabilities
- Extension of the business system for optimised dataflows and user interfaces, where applicable

## **LOW RISK IMPLEMENTATION**

Official documentation including security aspects between the systems as well as data and setup templates is also a natural part of the solution which will lower the implementation risks.

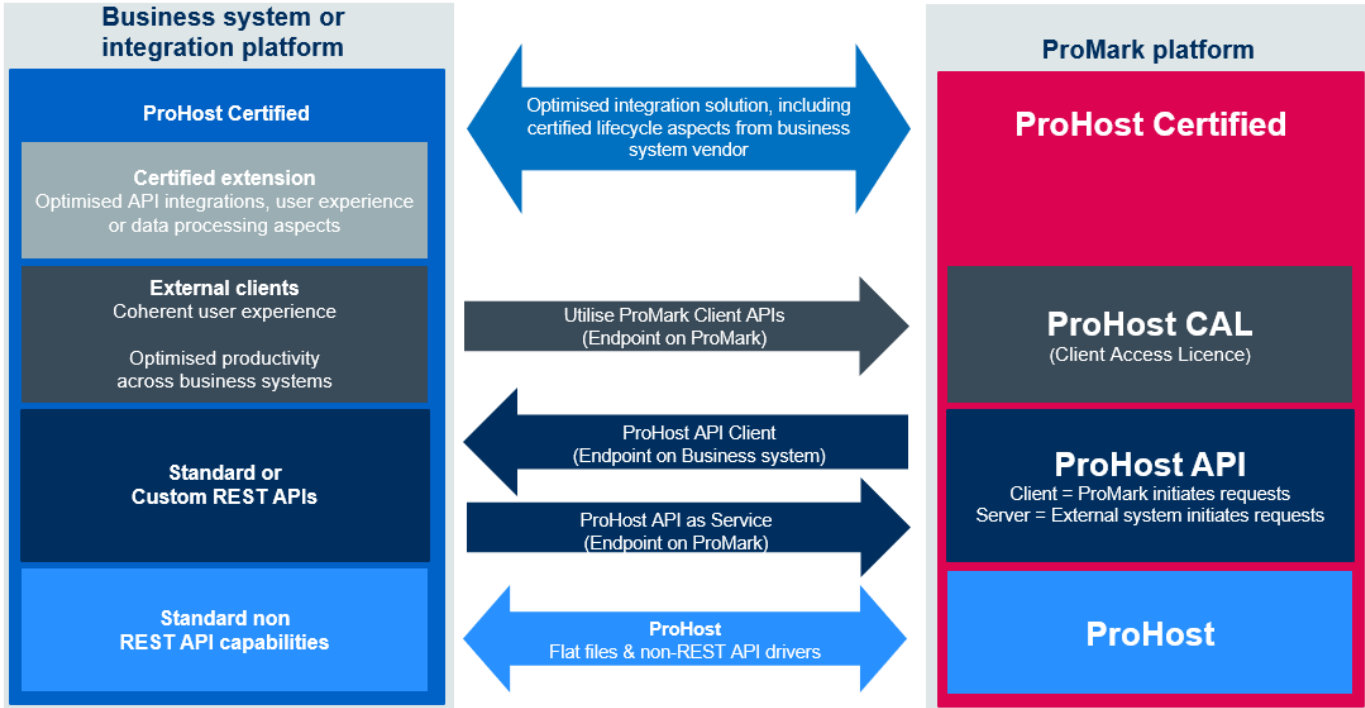

## **HIGH SECURITY**

High security is achieved through the use of the security requirements of the cloud solutions, and the use of API integrations where data is exchanged directly between the business systems.

## **FUTURE-PROOF WITH ACCESS TO ALL PROHOST INTEGRATION SOLUTIONS**

At the same time, ProHost Certified also allows for exploiting other ProHost integration solutions if you need different integration methods for different systems. This makes ProHost Certified to a future-proof all-in-one solution.

# ProHost Certified

## WHY CHOOSE PROHOST CERTIFIED?

ProHost Certified provides a number of benefits:

- The company gets a standard solution, supporting configuration instead of specific coding
- Simplified implementation with available documentation and templates for data and setup
- High security
- Future-proof solution which is continuously updated according to new versions of the cloud business systems
- Possibilities for exploiting other ProHost integrations for a complete solution

## OTHER TYPES OF INTEGRATION

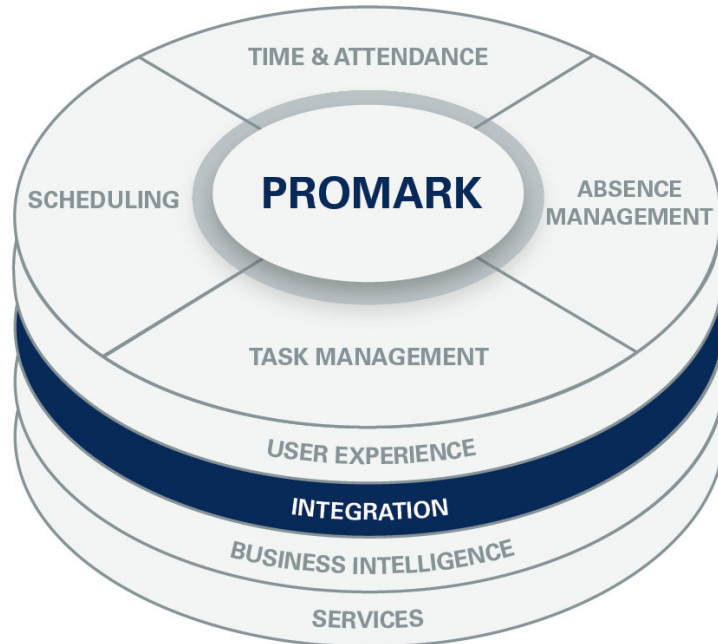

Depending on your need, we offer different integration methods.
